

## PICOTE LINER GLIDER

*Take Connection Lining Wet-Out Virtually Anywhere*

The Liner Glider is a lightweight, economical, compact manual roller that allows you to wet out short lateral and connection liners ranging from DN50 to 100, or 2 to 4".

It comes equipped with easy to change color coded and size stamped gap setting rings for almost any liner thickness you may need. The rings are stored onboard, so they are always there when needed.

The Liner Glider allows you to complete lining installations faster because there is no need to pull out a large wet-out table or electric roller - especially inside buildings or in small spaces where a traditional table would not fit.

### USES, BENEFITS, PRODUCTS AND PARTS

- Extremely lightweight, compact, & portable.
- Virtually maintenance free - no motors or electrical parts to wear out.
- Color coded and stamped rings make proper gap selection easy.
- Gap Rings are stored on board so they are always there where you need them.
- To use, place the liner on a flat, protected surface. Roll the Liner Glider back and forth over the resin slug while pushing the resin through the entire length of the liner until it is fully saturated.

Smart Roller Technical Specifications
